Technologies and Languages

- Java, JavaScript
- Git, React, mongoDB, Express, Node, React-three-fiber, React Redux

EXPERIENCE

Software Engineer Intern | Eduplus Campus :

Dec 2023 – Mar 2024

- Created a fully functional mobile app using Flutter
- Fetched the data from the database and implemented in the app
- Designed the UI and handed of well documented and easily readable code

Front-end Engineer | Vauge Sync digital :

freelance

- Build a website for companies landing page
- Designed the UI and handed of well documented and easily readable code

PROJECTS

Note taking app / full-stack web app

- Used react for the front-end and express and node for back-end and mongodb as database
- Implemented sign-up and login functionality with encryption
- Users can create notes, search for them, edit notes and delete notes

Full stack food delivery (React, Express, Node and mongoDB)

- The users can select any food item from the menu from different categories
- implemented stripe for easy payment
- User gets a real time update on their food order
- The restaurant can access the admin panel and get the requests and change the status of requests which will then show up on the client side

Html wrapper vs code extension (Typescript)

- Solved the problem of wrapping a html element into another element
- user can easily select the element they want to wrap and wrap it in their desired element
- used the vs code library

Apple website clone (React js, React three fiber)

- Built a stunning clone of the apple website using react js and three js
- Used a 3d model of iphone and showed it on the website using react-three-fiber

Crypto price viewer (React js)

- A beautiful website which shows you the current prices of crypto currency
- user will also get the date price chart of the currency they choose

EDUCATION

Sharad Institute Of Technology

Bachelor of Science in Computer Science 2025

GPA: 6.70
